V. RECENT MAIZE PUBLICATIONS

---

---

---

Le Conte, J. A contribution to the genetic study of resistance in maize to rust (Puccinia polysora) and some practical results obtained at Dahomey. Riz et Rizic. 5: 98-116. 1959.

Nickerson, N. H. Studies involving sustained treatment of maize with 
gibberellic acid II: Responses of plants carrying certain tassel-

Sustained treatment with gibberellic acid of maize plants car-
rying one of the dominant genes Tepod and Corn-grass. Amer. J.

Nickerson, N. H. and T. N. Embl er. Studies involving sustained treat-
ment of maize with gibberellic acid I: Further notes on responses 

Orton, E. R. Jr. Reconstitution of the variegated pericarp allele in 
1960. (Abstr.)

Peters, D. C., M. S. Zuber, and V. Fergason. Preliminary evidence of 
resistance of high amylase corn to the Angoumois grain moth. J.

Peterson, P. A. The pale green mutable system in maize. Genetics 45:

( Abstr.)

Poncova, J. Experiments on extending the viability of maize pollen by 
32: 1637-1650. 1959.

Portjanko, V. F. The response of maize to short days depending on 
1959.

Rabson, R. and G. D. Novelli. The incorporation of leucine-C14 into 
protein by a cell-free preparation from maize kernels. Proc. Nat.

1960.

Říman, L. The state of the problem of heterogenecous pollination in 

Monoploids (haploids) in maize (Zea mays L.). Polnochospodárstvo 
(Bratislava) 7 (9): 715-726. 1960.

I. National seminary on the genetics, plant improvement, agro-
technique, and pathology of maize. Rostlinná výroba (Prague) 10:

(Abstr.)
